# The Way Forward -- Together

Helicopter Aviation Training  
Conference & Tradeshow

## Reflections of a Pioneer

Mr. Sergei I. Sikorsky

- Technology develops, changes and makes possible that which had been previously thought to be impossible.
- Three challenges:
  - Build the machine (engineering)
  - Stay alive long enough to learn to fly it! (training)
  - Regulatory and legal issues
- Freedom of dreams and risks----drives/forces

Helicopter Aviation Training

## Changing the Rotary Wing Training Paradigm

- Training is a part of *reasonable* preparation for safe aircraft operation.
- JAA - regulations to address operational training issues.
- How does the training relate to the actual operational task environments?
- Do our training scenarios represent how we fly our aircraft?

## Operational Feedback: Civil and Military Operations and Training Challenges

- What is the operational scope?
  - NVG/combat training
  - Special operations
  - Law enforcement
  - Sling loads
